

Step 1. Choose a repo

First of all login with your GitHub account to see which installations you have access to.

LOGIN WITH GITHUB

Note: The GitHub auth screen for GitHub Apps like Repography says that apps can "act on your behalf". This is true for some apps, but not for Repography. As you'll see when [installing the app](#) we request only two permissions:

- ✓ **Read** access to code, issues, metadata, and pull requests
(to analyse your repo to create dashboards and posters)
- ✓ **Read** and **write** access to repository hooks
(to install a hook which keeps your dashboards up to date)
