 README  License

tsu

Gain a root shell on Termux while being able to run Termux commands as root.

Or run one off commands with well known `sudo` from normal linux distros.

tsu A su interface wrapper for Termux

Usage:

```
tsu
tsu [ -s SHELL ] [-p|-a] [USER]
tsu --dbg [ -s SHELL ] [-p|-a] [-E] [USER]
```

```
tsu -h | --help | --version
```

Options:

```
--dbg      Enable debug output
-s <shell>  Use an alternate specified shell.
-p         Prepend system binaries to PATH
-a         Append system binaries to PATH
-h --help  Show this screen.
```

This package also provides a minimal sudo which is enough to run most programs as root

```
sudo command
```

Building

A simple python script is used to make the final shell script as to avoid duplication in documentation.

Run it by using: `python3 extract_usage.py`
